DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 and 8-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki (20020190510) in view of Blomquist (20020135169).

Yamazaki discloses a gas generating composition that includes guanidine nitrate (para. 0033), RDX (para. 0025), oxidizers including mixtures of potassium perchlorate and basic copper nitrate (para. 0035) and a bonding agent such as carboxymethyl cellulose (para. 0039).

Blomquist teaches that both ammonium perchlorate and potassium perchlorate are known oxidizers for use in gas generating compositions (para. 0021).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to select the components as taught by Yamazaki since Yamazaki suggests that all of the components can be used in a gas generating composition. It is obvious to use ammonium perchlorate as taught by Blomquist in place of potassium perchlorate since Blomquist suggests that both are useful as oxidizers in gas generating compositions. It is also obvious to vary the parameters of the composition such as amounts to achieve a desired result. It is well-settled that optimizing a result effective variable is well within the expected ability of a person of ordinary skill in the subject art.

In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980), In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955). The solid solution and molecular mass limitations are considered to be inherent to the composition disclosed by Yamazaki. As to limitations which are considered to be inherent in a reference, note the case law of In re Ludke, 169 USPQ 563; In re Swinehart, 169 USPQ 226, In re Fitzgerald, 205 USPQ 594; In re Best et al, 195 USPQ 430; and In re Brown, 173 USPQ 685, 688.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
